SIMPLE SOLUTIONS

CONCRETE AND MASONRY
FLOOR COATINGS

DutchBoy®

EASY TO *apply*
EASY TO *protect*
EASY TO ... *rest easy*

Dutch Boy® helps protect and beautify concrete and pavers while extending the life of walkways, patios, pool decks, driveways, masonry and even basement floors.

Dutch Boy Concrete and Masonry Floor Coatings are available in sealers, waterproofers and concrete stain.

Patio shown in
Wet Look High Gloss

Easily protects the hardest surfaces.

Surfaces may be slippery when wet, and proper preventative precautions are recommended. To increase resistance, add an anti-skid additive to the coating when applying the final coat.

CLEAR SEALERS
Clear protection for beauty that lasts.

Patio shown in Water-Based High Gloss

WET LOOK

Brings out the beauty with a shiny, high–gloss finish.

Seals and protects concrete and masonry surfaces.

Ideal for pavers, walkways and pool decks. The interior/exterior water-based formula is also ideal for interior concrete floors.

Available in solvent-based formula for exterior and water-based formula for interior and exterior use.*

*Check your local store for product availability.

HIGH-GLOSS Shown in water-based formula
Patio shown in Satin

NATURAL LOOK

*Beautifies and
protects surface with a natural finish.*

Seals and protects concrete and masonry surfaces.

Ideal for concrete floors, pavers, walkways and pool decks.

Available in two sheens: matte and satin.

Water based for interior or exterior use.

MATTE

SATIN

PAVER SEALER
Protection that shines.

GLOSS

Adds a subtle gloss without changing the surface color.

Helps stabilize and harden joint sand.

Ideal for pavers and interlocking walkways.

Available in gloss finish.

Water-based formula for interior or exterior use.

GLOSS

WATERPROOFER
Season-to-season moisture protection.

NATURAL LOOK

Deeply penetrates surface without altering appearance.

Protects against damage from salt and freeze/thaw cycles.

Ideal for use on bare concrete and masonry surfaces; great for concrete driveways.

Available in natural look.

Water-based formula for interior or exterior use.

NATURAL LOOK WON'T ALTER SURFACE APPEARANCE

CONCRETE STAIN
Looks as great as it protects.

Patio shown in Ready-to-Use Gray

SOLID

Adds rich color and protection.

Protects surface from water, salt, chemicals, UV damage, flaking and color fading.

Ideal for patios, walkways, pool decks and basement floors.

Water-based formula for interior or exterior use.

PREP BEFORE
YOU *protect*

It's essential to start with clean, dry surfaces that are free from loose or peeling paint.

NEW OR BARE CONCRETE:

- Let new concrete cure at least 30 days before applying stain or sealer.

- If concrete is new, uncoated or well worn, start with a cleaner/degreaser/etching solution to assure the best possible final finish (fig. A).

- Etch the surface until it feels like rough sandpaper (fig. B), then drip some water on the surface to see if it soaks in (fig. C). If it does, great! You are ready to apply your coating. If not, etch again until the surface easily absorbs water.

- Allow at least 24 hours for it to dry before applying the product. If the surface doesn't feel rough enough, or has existing stains, apply a concrete bonding primer (following the label instructions, of course) and you should be ready to go!
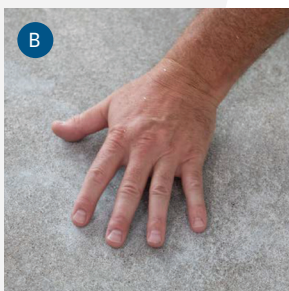

PREVIOUSLY COATED CONCRETE:

- Test to see if the previous coating was solvent or water based. Use a rag to apply xylene to the surface. If it lifts the previous coating, then a solvent-based coating was used. If there's no material on the rag and the surface is gummy, then a water-based coating was used. For best results, use water-based finishes on surfaces previously coated with water-based products and solvent-based finishes previously coated with solvent- or oil-based products.

- Remove any loose or peeling paint with a wire brush, then de-gloss the surface with 150-200-grit sandpaper.

- Follow up with a concrete cleaner, degreaser and etching solution. Rinse thoroughly and allow to dry completely before applying stain or sealer.

PROJECT CHECKLIST:

- Concrete cleaner and degreaser
- Etching solution (on new or bare concrete)
- 150-200-grit sandpaper
- Pump sprayer
- Paintbrush
- 3/8" to 1/2" nap roller cover
- Roller frame

- Extension pole
- Power washer (optional, when needed)
- Bonding primer (optional, when needed)
- Anti-skid additive (optional)
- Paint tray
- Stir sticks
- Gloves

For best results, use premium Purdy® applicators.
